Be RainWise

Manage your rain water at home

What's the problem?

With every storm, rain carries pollutants off our roofs, driveways and other hard surfaces to local creeks, Lake Washington and Puget Sound. During big storms, the sheer volume of this "stormwater" can cause sewer overflows, and erode hillsides and stream banks. Rain gardens and cisterns can help control this stormwater with your help.

Steps to becoming RainWise

Go to www.rainwise.seattle.gov

1. **Check your eligibility** by typing in your address to find out what will work on your property and if you can get a rebate.
2. **Get bids** from trained contractors in the "Find a Contractor" section of the website. Choose your contractor.
3. **Your contractor will schedule a pre-inspection** for approval to build and then install your system.
4. **Your contractor will schedule a final inspection.** A RainWise inspector will confirm that your installation was done properly.
5. **Get your rebate!** Submit your rebate package and receive your rebate within 6-8 weeks.

Questions? Email rainwise@seattle.gov
or call Garden Hotline at 206-633-0224.

RainWise contractors design rain gardens that fit the unique needs of each site.

RainWise REBATES!

**RainWise will pay for
rain gardens and cisterns**

The RainWise program provides rebates that cover most or all of the cost of installing cisterns and rain gardens on your property. To receive a rebate, you must live in an eligible combined sewer overflow basin. We'll help you determine if your property qualifies. **The average rebate has been around \$4800.**

Cistern, rain garden or both...

How will you be RainWise?

How does a RainWise **cistern** work?

A **cistern** is a large, above-ground container used to collect roof water. It is like a huge rain barrel and can hold 200 or more gallons. During the winter, RainWise cisterns collect rain and slowly release it to the sewer system. In the summer, the water can be collected and used for watering.

Cisterns come in several shapes, sizes and colors.

RainWise cisterns are especially equipped to let water trickle out slowly during the winter months. This ensures the cistern empties after each storm and is ready to fill during the next rainfall.
